Not illustrated. 1967 Excerpt: . . . radioactivity indicate the amounts of certain elements present in the area being tested. An instrument for performing in situ analyses for silver is now operational and one capable of detecting gold is being developed. New sampling equipment and methods are essential to the success of the Heavy Metals program since accurate sampling is the vital link between finding targets and developing an actual resource. In recent years one of the most interesting and novel developments in drilling has been that of vibratory-resonant drilling. This concept, which consists of vibrating the drill rod rather than pounding it, has increased the speed of drilling considerably in soft and unconsolidated materials. This type of drilling was developed by a totally owned subsidiary of the Shell Oil Company and is being used commercially in driving piles. Experimental units have been developed for drilling smaller diameter holes. The Bureau of Mines has cooperative agreements to test...
