

The Analysis of Air Force Institute of Technology Theses Related to Contracting

By Thomas M. Clohessy

Biblioscholar Okt 2012, 2012. Taschenbuch. Book Condition: Neu. 246x189x3 mm. This item is printed on demand - Print on Demand Neuware - With the end of the contracting graduate programs at AFIT, it is appropriate to ask what contributions AFIT theses have made to the contracting community. Scholars (e.g., Das and Hanfield 1997) have argued that thesis and dissertation research is one useful method in determining contributions to the field. Accordingly, a rigorous review of contracting-related theses done at AFIT should provide useful information regarding the contributions made to the contracting community and possibly suggest how future research, performed elsewhere, might continue to make contributions in the future. Through this study it was discovered that the majority of the contracting research conducted at AFIT pertained to purchasing planning, organization, policy, and personnel. There has been little research done on commercial purchasing issues such as buyer-supplier relationship and supply chain integration. The majority of the research done was in exploratory study format using mostly case studies, interviews, and surveys as the research design to collect the data. The most popular form of data analysis technique used was descriptive statistics followed by anecdotal evidence. 48 pp. Englisch.

Reviews

A must buy book if you need to adding benefit. We have study and so i am sure that i am going to likely to study once again again in the foreseeable future. I realized this book from my i and dad encouraged this ebook to discover.

-- **Duane Fadel**

These kinds of book is every thing and helped me hunting forward plus more. It is probably the most remarkable book we have read through. It is extremely difficult to leave it before concluding, once you begin to read the book.
